

Dear Parents,

January 28, 2019

We have come to the end of our third unit of inquiry which was:

‘Sharing Our Planet.’

Central Idea: People play roles in saving the earth.

Lines of inquiry:

- i. Natural resources contamination changes living things life.
- ii. Different ways of preventing the environment from pollution.
- iii. The impact of people’s behavior on the environment.

In this unit the students not only learned a lot but had fun celebrating. They celebrated “Yalda Night” with potluck and lots of goodies. They also had lots of excitement for Christmas and New Year. In this New Year the girls started off with learning about air and water pollution. They learned about different ways of protecting the earth. We had fun in trying experiments in our UOI unit.

We also had the privilege to go on a field trip and plant two trees together. Continuing forward we also touched based upon learning about new cultures celebrations.

We will continue forward into their next unit where they will study about the countries and different cultures.

In math we covered:

Learning about the whole clock, also putting it in letters and words.
Addition and subtraction of two-digit numbers. Story telling for addition and subtraction of two-digit numbers. Place value up to 1000.

In Language arts we covered:

Writing short sentences and dictation use of them. Practicing punctuations such as comma, capitalization and period. We also covered asking sentences, imperative sentences and telling sentences. Reading and retelling stories. We studied subject and predicate in a sentence. Students also learned subject pronouns and object pronouns.
