

February Newsletter KG

December and January have been fun filled months with various Math and science activities.

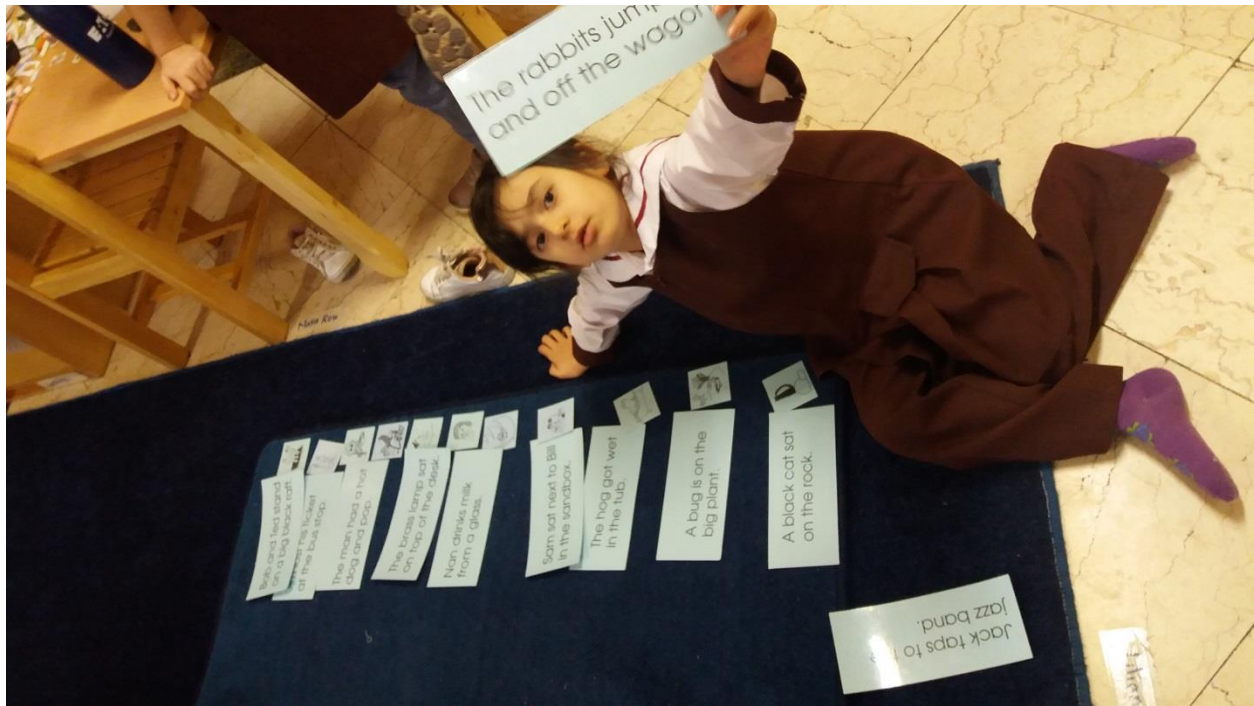

Language

In Language our younger children enjoy working with movable alphabets, building words and matching them with the appropriate pictures. Older children are working with the phonograms, learning about how to write a sentence.

Students have been shown how to use classified cards and are learning and reviewing their sounds with the Sandpaper letters in print and to help build their vocabulary and writing in Language. Older children are working with parts of

speech, and also writing in their journal books daily.

Math

We have been exploring numbers in math from 1 to 100, making sure we know all the numbers that come before and after. Some children are working with Odd and Even numbers, learning about addition and subtraction. All this is done by child

through progressive manipulation of extensive materials in our classroom.

Unit of Inquiry

Our children learned about different feelings and consequently different behaviors and also body languages. They had class discussions about these changes of moods, causes and effects.

Music

Every Sunday and Monday the children enjoy singing and using musical instruments with the music teacher. They are learning the fundamental skills which prepare them for our Nowrooz Concert.

Arts and Crafts

Once a week the children look forward to and create a theme related craft with the Art teacher. They love the crafts they make and usually are very proud of the result.

French

Children Greet Madame Mostofi in French and play word games with colorful cards. The Children especially enjoy the French songs played and are practicing their concert songs.
