

**Dear Parents,**

**January 24, 2021**

We have come to the end of our third unit of inquiry which was:

**‘Sharing Our Planet.’**

Central Idea: People play roles in saving the earth.

Lines of inquiry:

- i. How the contamination of natural resources changing living things lives.
- ii. Different ways of preventing the environment from pollution.
- iii. The impact of people’s behavior on the environment.

In this unit the students not only learned a lot but had fun celebrating. We celebrated Shabe Yalda and New year. In this New Year the girls started off with learning about air, water and soil pollution. They learned about different ways of protecting the earth. We had fun in trying experiments in our UOI unit.

We will continue forward into their next unit where they will study about the countries and different cultures.

**In math we covered:**

Addition and subtraction of two-digit numbers with regrouping. Story telling for addition and subtraction of two-digit numbers.

## In Language arts we covered:

Writing short sentences and dictation use of them. Practicing punctuations such as comma, capitalization and period. We also covered asking sentences, imperative sentences, surprising sentences and telling sentences. Reading and retelling stories. We studied was and were and practiced a lot on past tense verbs and silent readings.
