

# Sharing The Planet

# U.O.I

On unit 3, we started with the world around us.

The states of matter, what objects are made of and physical properties of matter.

We read some PDFs and watched a couple of videos.

Then we learned how the water cycle works and read about the natural resources, too.

We finished up this unit by discovering the soil and its layers.

# L.A

Through this unit we worked on English grammar more than before, in this unit we worked on some reading from “Reading Street”:

- I Wanna Iguana
- My Rows And Piles Of Coins

In this unit we had a lot of videos for our offline sessions and could finish up until lesson 12 of our L.A booklets.

# Math

We wrapped up “addition and subtraction” strategies and started “multiplication” from our York Mathematics book.

We had some videos on Moodle, so we can better memorize the multiplication tables.

Through this unit we learned how to solve problems using the bigger picture.

# ICT

On ICT we are working on CODE.ORG and we are learning how to code.

We REALLY love it !

We could move on to lesson 1 and 2 and complete some practice parts on CODE.ORG.
